

Jaison Kerr

Kerr Farm Vineyard

In Kumeu we have been experimenting with a new spray, *Trichoderma (TRI-D25)* that 'eats' botrytis.

"The spray seems to have worked on our Chardonnay", says Wendy Kerr, who estimates they will commence vintage in the first week of April or shortly thereafter, depending if the fine weather holds out.

"Our grapes are in great condition following all this lovely warm, dry weather", she said.
