31 October, 2002

To Whom It May Concern:

I have used Biomin Calcium over a period of years in my stone fruit orchard, which is based in the Swan hill region of Victoria Australia. This region is renowned for producing premium quality summer fruits and is regarded as the benchmark in Australia

During this time I have extensively used products manufactured by JH Biotech and distributed in Australasia by Zadco for Quality Gro. I have found that this range of products including Biomin calcium is excellent for improving my fruit quality, skin quality and shelf life in the many varieties of stone fruit, which I grow.

I would not hesitate to recommend the above products or companies to any horticultural enterprise who may be interested.

Sincerely yours,

Michael Tripodi
