

HUMAX

PROTOCOLS

80% Humic Acid.

High Quality Product Extracted from Leonardite

Humax™ consists of a mixture of macromolecules that increase the uptake of mineral nutrients in plants through positive impact on cation exchange capacity and water holding capacity of soils, enhancing aeration, tilth and soil quality

- HUMAX™ is 100 % soluble and may be applied by many application methods including fertigation, however NOT recommended as a foliar spray to fruit crops.
- HUMAX™ Contains 80% Humic acid (no water) in a fine flake
- Because Humic acid is Hydrophobic in nature, HUMAX™ will initially repel water
- To aid in mixing of HUMAX™ apply a small amount of spreader into the water prior to adding Humax
- Sprinkle HUMAX™ onto the water prior to requirement to allow the product to self settle into the water before stirring.
- HUMAX™ is compatible with most fungicides, insecticides and herbicides. Always run a compatibility test before spraying with any chemicals.
- HUMAX™ is INCOMPATIBLE with Calcium based products and is not very stable in alkaline soils.
- Please call Roots Shoots & Fruits Ltd if you have any queries – 09 372 9155
